## BUILDING INSPECTION GUIDELINES

- Footing Inspection (Concrete/Masonry System): Prior to concrete pouring to check for correct building location, proper sizing of footer, soil conditions and size and placement of any reinforcing bars and required rebar tail for electrician.
- Foundation Inspection (Concrete/Masonry System): Prior to backfilling to check for correct size, ties, reinforcements and parging.
- Footing Inspection (Superior Wall System): Prior to installing stone bed and setting walls.
- Foundation Inspection (Superior Wall System): Prior to backfilling and after 1<sup>st</sup> floor joist and deck are set.
- Framing Inspection: Prior to insulation or covering.
- Energy/insulation Inspection: Prior to covering.
- Wallboard inspection.
- Final Inspection: Made when building is completely enclosed. All glazing, egress doors and windows and gypsum board have been installed. Additionally, all plumbing, electrical and mechanical equipment must be installed and in operating condition. Exterior stairs, walks and driveways shall be installed. This inspection must be made before a certificate of occupancy can be issued.
- Deck Inspections: Footer and ledger board inspection. Rough framing inspection prior to roofing and floorboard installation. Final inspection after installation of all roofing and floorboards, guardrails, handrails and stairways. Decks not at grade and supporting hot tubs or spas must bear the seal of a professional engineer on drawings.
